

IN THE CLAIMS:

Please cancel claims 16 and 24.

13. (Once Amended) An arrangement for directly controlling the movement of a zoom system in a stereo microscope, comprising:

direct driving motors for at least one moving lens system wherein the driving motors are controlled by a control unit which reads calculated pre-stored values of reference points from a mathematical controlling curve for directing the movement of the at least one moving lens system by controlling the driving motors in a corresponding manner without necessitating use of mechanical generation of the mathematical controlling curve and without an additional monitoring system.

14. (Once Amended) The arrangement according to claim 13 with two lens members which are controlled independently from one another.

17. (Once Amended) The arrangement according to claim 13, wherein the driving motors are linear drives.

19. (Once Amended) The arrangement according to claim 18, wherein the driving motors are arranged between lens pairs.

22. (Once Amended) The arrangement according to claim 13, wherein a linear magnification
